

Questions for SLE data analysis

1. Read the data into a data frame called “dat”
2. how many columns and how many patients are there?
3. data summary of following columns : TLC, Platelet, Neutrophils, Lymphocyte, creatinine, ALT, Bilirubin, Proteins, ALP, Calcium, Albumin
4. Divide the screen into 4 and plot the histograms of : TLC, Platelets, Neutrophil, Lymphocyte
5. Divide the screen into 4 and plot the histograms of : Bilirubin, Proteins, Calcium and Albumin
6. Divide the data into two subsets: subset 1 with `Lupus_anticoagulant_binary=1`
subset 2 with `Lupus_anticoagulant_binary = 0`
7. Between subset 1 and subset 2, compare the statistical summaries of Neutrophils.
Between subset 1 and subset 2, compare the bar plots of Bilirubin.
